

Electronic Door Handle and Door Fitting

Uhlmann & Zacher has established itself in the electronic locking systems market since 1996. With many patented product developments and system enhancements, U&Z has set new benchmarks in the field of transponder-based locking systems. The company is focussing on open and integrated solutions in the development phase itself.

Tailor made products

Be it interior doors, storey doors or connecting doors – the **electronic door handle** CX6172/CX2172/CX8172 and the **electronic door fitting** CX6174/CX2174/CX8174 in a timeless stainless steel design can be installed in virtually all commercially available doors and electronically control the access to the doors. The complete electronics, mechanical parts, LED signalling and the power supply have been fitted in the small space of the door handle. The installation in doors works without special tools or wiring. If desired, the door handle/door fitting can also be controlled via a radio network. The audible and visual signalling of the authorisation status using red and green LEDs enables intuitive operation.

The electronic door handle/door fitting can be used in the **Clex prime**, **Clex private** and **Clex public system** from Uhlmann & Zacher

Therefore it can be installed in **almost any building**, from industrial or office complexes over objects of public administration, hospitals, universities, law firms and doctors' clinics to residential buildings.

The integration is supported by the open protocol **OSS Standard Offline** and if an additional online module is used also **OSDP**. In addition to the proven **868 MHz radio version**, the electronic door handle/door fitting is also available with **Bluetooth® Low Energy**.

In addition, the **Uhlmann & Zacher apps** enable the management, opening and closing of the units. Thereby the smartphone and the electronic door handle/door fitting communicate via Bluetooth® Low Energy.

Your Benefits at a glance

Easy wireless installation and retrofitting

Intuitive operation thanks to clear LED signaling

Certified for fire and smoke resistant doors and emergency exit doors

Offline or online operation possible

Choice of different variants and door handle designs

Optionally with round or oval rose as well as with narrow, wide or short plate fitting

Mobile, flexible, secure: Access via Smartphone

With our new mobile extensions, users of electronic door handles/fittings with Bluetooth® Low Energy can now manage their electronic door handles/fittings as well as open and close them via Smartphone. The locking units and the smartphone do not have to be connected to the internet at the time of opening. Therefore, it is possible to easily open even remote doors

in underground garages oder basements. This is possible both with the smartphone and also with RFID transponders. To ensure the necessary security, Clex mobile systems use a 2-factor authentication by default in addition to the invitation by e-mail.

In the Clex private system, the door handles/fittings can be easily managed from the smartphone using the **Keyng app**. In the Clex prime system, the management is done via the **Keyvi management software** via PC or laptop.

With the **Clex Key App**, the electronic locking units can be opened and closed using the smartphone. The app is available free of charge in the Apple Store und Google Play Store.
