CLEX PRIVATE MOBILE

U²

*Smart access control for small
and medium-sized buildings*

Mobile, flexible and secure

With **Clex private mobile**, users can manage their electronic locking units (electronic door handle, electronic locking cylinder) as well as open and close them. In the process, the smartphone communicates with the locking units via the **Bluetooth® Low Energy technology**. Alternatively, opening and closing is also possible using the RFID transponder. Clex private mobile is particularly suitable for small to medium-sized buildings such as doctors' clinics, law firms, small offices or private homes.

The locking system can be managed easily using the the **Keyng App**. The smart navigation guides the user through the app and always provides a clear overview of all the transponders and smartphones. Functions such as disassembly, battery replacement or service opening are also possible in the app. It is easily possible to manage access to different kind of doors.

With the **Clex Key App**, the electronic locking units can be opened and closed using the smartphone. Thereby the smartphone does not have to be connected to the internet.
