# CLEX PRIVATE

U<sup>2</sup>Z

*Electronic locking systems for  
small or medium-sized projects*

UZ

## Flexible configurations

Whether doctor's surgeries, law firms or private homes: The Clex private system makes it possible for small and mid-sized areas of application to take advantage of the comfort and security of an electronic locking system.

The assembly of the electronic cylinders is in particular very flexible. Whether double-knob cylinders with electronic authorisation on one or both sides, half cylinders or furniture locks: Clex private offers almost unlimited possible combinations.

Flexible upgrading and expandability are the salient features of Clex private. Due to its compatibility to standard DIN mortise locks, it can be retrofitted easily and cost-efficiently without any additional constructional measures at any time.

### Learning/Clearing System

As a Learning/Clearing System, Clex private features easy commissioning and operation: Access rights may be learned and cleared without the help of a software or accessory device. If you are in the programming mode, you can teach-in up to 1,000 transponders into a cylinder, door handle and wall mounted reader.

### Software for administration – Keyng

In addition to the Learning/Clearing System, Clex private can also be easily managed using the Keyng management software. The transponders are read by the locking units and sent to the software via the USB radio stick (868 MHz). The read transponders can now be authorised for the individual locking units, also with time restriction.

### App for administration – Keyng

In addition, the Clex private system can also be managed comfortably using the Keyng app. Smartphone and locking units communicate via Bluetooth® Low Energy. The bottom line is the encrypted data transmission with Secure ID. This security encryption protects the transponder from unauthorized copies.

**Examples from our product range:**

2021-06-EN

**CX2122**

Double-knob cylinder with electronic authorisation on one side, as CX2124 also available with electronic authorisation on both sides

**CX2162**

Compact electronic knob cylinder with electronic access right on one side

**CX2132**

Wall mounted reader for switching potential-free contacts

**CX2172**

Electronic door handle with electronic authorisation on one side

**CX6932**

Radio switching module to activate the cylinders
